

# green your world choosing the right turf

Choosing the right turf for your lawn is an important decision - you will be living with it for many years to come

At Jimboomba Turf, we are **dedicated to ensuring** you choose the right turf for your lifestyle.

You should consider factors including usage, climate, appearance, light and shade, wear and tear.

## QUESTIONS TO ASK YOURSELF WHEN LOOKING FOR TURF

**Q** DO I HAVE A LOT OF  
: SHADE IN MY GARDEN?

**Q** AM I LIVING IN A  
: DROUGHT AFFECTED AREA? WHAT ARE THE WATER RESTRICTIONS?

**Q** AM I PREPARED TO CARE FOR  
: MY LAWN FREQUENTLY?

**Q** DO I HAVE AN ACTIVE  
: FAMILY?

**A**: at Jimboomba Turf,  
we have the answers

Grasses respond better in certain environments and can handle stress differently.

Buffalo and couch are the two varieties that you will have most commonly heard of:

- **couch: fine leaf turfgrass**
- **buffalo: broad leaf turfgrass**

**Legend:** turfgrass, used on major stadium surfaces in Australia is a solid choice for Queensland. Legend couch has a fine texture. It displays a dark green colour with excellent wear tolerance

**Sir Walter:** is also a top choice for Queensland. It survives on little water once established and is very shade tolerant. It is low maintenance and a rich green colour.

**CT2 couch:** has a fine to medium texture and is a mid to dark green colour. It has a low growth profile and has good wear tolerance. It has good winter colour retention.

We also sell green couches and specific grasses for sports usage.

**Some growing situations may require a different solution - talk to one of our sales team to determine which turfgrass variety will provide you with years of satisfaction.**

## our pick: **Sir Walter**

**Sir Walter** has been chosen **specifically for Australian conditions**. It is a premium turf with:

- excellent shade tolerance
- drought tolerance
- soft texture
- salt tolerance
- low maintenance requirements

It has proven to be successful, no matter where it is grown in Australia.

And our team that have **Sir Walter** at home speak of it in hallowed terms - they absolutely believe in it's **transformative powers!**

**“Sir Walter”**  
PREMIUM LAWN TURF

**water** early in the morning so the lawn can dry. this prevents disease and reduces evaporation when **mowing** never remove more than  $\frac{1}{3}$  of the leaf

# 13 TURF

## DID YOU KNOW?

the temperature on a green lawn in mid summer is 10°C less than bare soil, and has the cooling effect of 8.75 tonnes of air conditioning

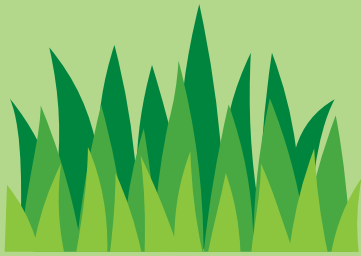

## Q WHICH IS WHICH TURF VARIETY?

|                        | buffalo            | couch          |
|------------------------|--------------------|----------------|
| leaf width             | wide               | narrow, fine   |
| softness               | soft               | soft           |
| shade tolerance        | good               | very poor      |
| colour                 | mid to deep green  | mid green      |
| frost tolerance        | poor               | poor           |
| wear tolerance         | good               | good           |
| sensitive to dog urine | not very sensitive | very sensitive |
| fertiliser needs       | low                | high           |
| water demand           | low to medium      | low            |

## DID YOU KNOW?

turf absorbs carbon from the atmosphere and stores it in the soil, a job it does better than trees, which shut down once carbon dioxide levels are too high
